DEPARTMENT OF AGRICULTURE, BENGAL.

FINAL FORECAST OF THE JUTE CROP OF BENGAL, 1941.

[NOTE.—**On an average of the five years ending 1939-40, the areas under jute in the Province of Bengal and the Bengal States to which this forecast relates, represent some 78·7 and 1·3 per cent. respectively to the total area under jute in India.**]

Season.—As noticed in the Preliminary Forecast the early weather conditions were not favourable. Shortly after the completion of sowings which was rather delayed there were occasional spells of incessant and excessive rainfall which had an adverse effect at important stages of the growth of the crop. Excessive rains, floods and cyclone caused damage particularly to lowland crops in East and North Bengal and as a result the districts of Noakhali, Bakarganj, Rangpur and Jalpaiguri were seriously affected. The damage was also fairly heavy in Mymensingh and Tippera. The growth of the crop in highland tracts has generally been satisfactory.

Condition of the Crop.—The condition of the highland crop has been healthy and its growth satisfactory. The crop in the low and midlands other than that damaged did fairly well at the advance stages of their growth. Up to the date of this report steeping water has been generally reported sufficient.

Area of the Crop.—The area under jute (Final Forecast, 1941) of 1,532,855 acres is the licensed area (Preliminary Forecast, 1941) with certain modifications reported by the Jute Registration Department regarding non-sowing of licensed areas, sowing of unlicensed areas, destruction, etc.

The total area under the crop for the two States is estimated at 55,600 acres.

Outturn.—As in the previous years the percentage figures are calculated on the basis of Divisional normals which remain as follows:—

	Bales per acre.
Dacca and Chittagong Divisions	... 3·7
Rajshahi Division	... 3·5
Presidency and Burdwan Divisions	... 3·2

The total outturn of the crop is estimated at 4,251,045 bales for the Province and 76,600 bales for the two States.

Director of Agriculture, Bengal.

DEPARTMENT OF AGRICULTURE, BIHAR.

FINAL FORECAST OF THE JUTE CROP OF BIHAR, 1941.

[NOTE.—**On an average of the five years ending 1939-40, the area under jute, to which the Bihar forecast relates, represents about 11·3 per cent. of the total area under jute in India.**]

Acreage.—The Final District Returns of the six jute-growing districts of the Province show an area under jute of 242,500 acres as against the last year's area of 282,200 acres. The decrease in area in Purnea is due mainly to propaganda undertaken for reducing the cultivation, and also to some extent to the fluctuating market of the crop last year.

Weather conditions.—In March scanty showers fell in all the jute districts. In April the rainfall was light and below the normal in all the jute-growing districts. In May heavy rain fell in Purnea and moderate elsewhere. The fall was above the normal everywhere except in Bhagalpur and the Santal Parganas where it was below the normal. In June rainfall was general throughout the jute districts. In July the rainfall was above the normal in Champaran and Darbhanga and below the normal elsewhere. In August the rainfall was general but above the normal in Purnea, Champaran, Muzaffarpur, Darbhanga and Bhagalpur. The weather was on the whole favourable for the growth of the crop except in Purnea.

Outturn.—In the district of Purnea the outturn of the crop has been estimated at 50 per cent. of the normal. Champaran reports 95 per cent. Muzaffarpur, Darbhanga, Bhagalpur and the Santal Parganas report 50, 60, 67 and 57 per cent., respectively.

Accordingly I estimate that the outturn this year will be 51 per cent. of the normal as against 61 per cent. in the last year. Taking the normal outturn per acre to be $3\frac{1}{3}$ bales as in previous years the gross outturn on 242,500 acres estimated to be under jute in this Province, comes to 414,300 bales, against 571,000 bales last year. Adding 14,500 bales to this as probable imports from Nepal, the forecast figure for Bihar comes to 428,800 bales.

FINAL FORECAST OF THE JUTE CROP OF ORISSA, 1941.

[NOTE.—**On an average of the five years ending 1939-40 the area under jute in Orissa to which this forecast relates represents about 0·7 per cent. of the total area under jute in India.**]

Acreage.—The crop is mainly grown in district Cuttack. In other two districts, Balasore and Puri, it is cultivated to a small extent. The total area sown is now finally estimated at 25,055 acres against 28,400 acres in the preceding year.

Character of the season.—The rainfall was below the normal in all the three districts in April, May and June. In July it was above normal everywhere. In August it was below normal in districts Cuttack and Puri but above normal in district Balasore. Deficient rainfall at the time of sowing affected the acreage under the crop.

Outturn.—The total outturn for the Province is estimated at 70 per cent. of the normal against 54·71 per cent. in the preceding year. On the basis of $3\frac{1}{8}$ bales as the standard outturn per acre, the gross yield this year comes to 58,810 bales against 51,850 bales (Final Review) in the preceding year.

DEPARTMENT OF AGRICULTURE, ASSAM.

FINAL FORECAST OF THE JUTE CROP OF ASSAM.

[NOTE.—**On the average of the five years ending 1939-40 the area under jute in Assam represents 7·8 per cent. of the total area under jute in British India.**]

Character of the season.—As indicated in the Preliminary Forecast, in the earlier part of the year the weather was not generally favourable. The floods of early May and June were repeated in July and August when there was heavy rain in practically all districts except in Darrang, Sibsagar and Lakhimpur where the weather was rather dry. The crop was very considerably damaged by flood in the three main jute-growing districts of Nowgong, Goalpara and Sylhet.

Area sown.—The total area under the crop as estimated by the Deputy Commissioners comes to 276,100 against the revised figures of 356,200 acres of last year and 270,000 shown in the Preliminary Forecast of this year. The area reported in the Preliminary Forecast has been revised in four districts.

Outturn.—The percentage of outturn per acre has been estimated to be 62 of the normal against 74 (revised) of the previous year. On the basis of the normal yield of 3·5 bales of 400 lbs. each, per acre, the total produce of the Province is 607,300 bales against 918,500 bales (revised) of last year or a decrease of 34 per cent.

Cachar (Plains)	200	300	200	80	60	800	400	Middle of August. Normal.	The decrease in area is due to excessive rain, causing flood at the sowing time. The weather was not favourable from June to August. Flood has caused much damage to the crop. The reasons noted above are responsible for the outturn to fall below the normal.
Sylhet ..	13,000	47,200	35,900	80	60	132,200	75,400	First week of August. Normal.	The decrease in area is due to unfavourable weather at sowing time. Heavy rainfall caused two consecutive floods in May and June which almost totally damaged the crop. The outturn is, therefore, estimated to fall far below the normal.
Goalpara ..	60,000	112,100	105,000	70	60	274,600	220,500	First week of July Normal.	The decrease in area is due to low price of jute last year and also unfavourable weather condition at the time of sowing. The weather for the crop was not favourable. Early flood in May damaged the crop to a little extent The outturn is estimated to be worse than last year.
Kamrup ..	39,800	71,000	58,800	80	65	198,800	143,800	Middle of August. Normal.	The decrease in area is due to unfavourable weather at the time of sowing and fall of price of jute. The weather was unfavourable throughout the season. Some damage was also done by early flood in the low-lying areas. The outturn is expected to fall below the normal.
Darrang ..	12,100	29,300	17,100	75	65	76,900	38,900	Middle of July. Normal.	The decrease in area is due to unfavourable weather at the time of sowing and abnormal fall of price of jute. The weather was dry from June to August. Some damage was done to the crop by insect pests. These account for the low outturn.
Nowgong ..	50,000	86,300	51,000	70	60	211,400	107,100	First week of July. Normal.	The decrease in area is due to low price of jute obtained last year and excessive rain at the time of sowing and weeding. Character of weather during the first part was bad due to excessive rain and it adversely affected the weeding and the growth of the crop, but consequently the weather improved during the latter part, slight damage was also done by flood. The reasons stated above are responsible for the low outturn.
Sibsagar ..	300	900	900	85	95	2,700	3,000	First week of August. Normal.	The weather was, on the whole, favourable for the growth of the crop, no injury due to flood, insects or other causes, was done to the crop and almost a normal outturn is anticipated.
Lakhimpur ..	700	3,300	4,000	95	90	11,000	12,600	Middle of July. Normal.	The increase in area is due to extension of cultivation due to favourable weather at the time of sowing. Character of weather from June to August was not quite favourable and hence the outturn is expected to be slightly below normal.
Garo Hills (Plains).	5,000	5,800	3,200	50	50	10,100	5,600	Last week of July. Normal.	The decrease in area is due to unfavourable weather at the time of sowing and low price of jute. The weather from June to August was not favourable due to excessive rain which damaged the crop to a great extent. The above reasons caused the outturn to fall far below the normal.

DEPARTMENT OF AGRICULTURE, BENGAL.

Calcutta, the 19th September 1941.

First Forecast of the Winter Rice Crop of Bengal, 1941-42.

(*Note.*—On an average of the five years ending 1939-40, the area under winter rice in Bengal has represented some 20·8 per cent. of the total area under winter rice in India.)

Character of the season.—Preparation of lands for and sowings of broadcast paddy were somewhat delayed in places owing to a spell of hot and dry weather in April. However fairly widespread rainfall in May facilitated the operations, although some damage was done in some North and East Bengal districts owing to excessive rain.

Good showers in June were favourable for the preparatory tillage for winter paddy seedlings and sowings in seed-beds. Rainfall in July was excessive in most of the districts with the result that transplantation was somewhat retarded in low lands; elsewhere the operation made satisfactory progress. Alternate rain and sunshine in August facilitated transplantation and helped the growth of the crop. Flood, however, caused damage to the crop in some East Bengal districts. The present outlook may be regarded as satisfactory on the whole.

Acreage.—According to the figures returned by the District Officers, the total acreage under winter rice is 16,838,900 acres as compared with 14,776,400 and 14,916,700 acres in the corresponding and final forecasts of last year respectively. The large increase in area is due to the release of jute lands on account of restriction.

Outturn.—From the summary of the district returns appended it will be seen that 5 districts report a normal crop of 100 per cent., 19 districts a crop varying from 75 to 98 and only 3 districts below 70 per cent. of the normal.

According to the above estimates, the provincial outturn works out to 83 per cent. as against 75 and 63 per cent. of the normal estimated in the corresponding and final forecast of last year, respectively.

S. ABDULLAH,
for *Director of Agriculture, Bengal.*

Dacca, the 26th September 1941.

DEPARTMENT OF AGRICULTURE, BENGAL.

Ramna, Dacca, the 27th September 1941.

Preliminary Forecast of the Bhadoi Crops of Bengal, 1941-42.

(*Note.*—On an average of the five years ending 1939-40 the area under autumn rice in Bengal has represented some 7·7 per cent. of the total area under rice in India.)

Character of the season.—Preparatory tillage and sowings were delayed owing to a spell of hot and dry weather extending up to the first part of April. Prospects soon changed with outbreak of rains in the middle of April, but the fall from the first part of May and again from the end of May to middle of June was heavy and excessive. Due to continuous and excessive rainfall after sowings, floods and cyclone, the crops reported to have suffered damage, the extent of which is considerable in Bakarganj, Noakhali and in parts of Tippera and Mymensingh and to a little extent in some other tracts. Some damage has also been caused by insect-pests.

Acreage.—The total area sown with the different *bhadoi* crops this year is reported to be 6,946,200 acres as against 6,042,000 acres and 6,131,900 acres respectively in the corresponding and final forecasts of last year.

Of this, the area under autumn rice is estimated at 6,304,100 acres as against 5,336,700 acres and 5,416,200 acres respectively in the corresponding and final forecasts of last year.

Outturn.—According to the District Officers' estimates, the outturn of the different *bhadoi* crops for the Presidency works out at 80 per cent. of the normal this year as against 73 and 70 per cent. respectively in the corresponding and final forecasts of last year.

The outturn of autumn rice as estimated by the District Officers works out to 80 per cent. of the normal for the Province this year as against 72 and 69 per cent. respectively in the corresponding and final forecasts of last year. The crop will, in all likelihood, yield an outturn of over 90 per cent. of the normal for the Province as a whole.

M. CARBERY,
Director of Agriculture, Bengal.

NOTIFICATION.

No. 9576 Mis.—13th October 1941.—In exercise of the power conferred by clause (*01*) of section 138 of the Bengal Local Self-Government Act of 1885 (Bengal Act III of 1885), the Governor is pleased to make the following rules, namely:—

Rules.

1. Whenever distress due to drought, flood, cyclone or any other natural calamity is apprehended in any district, the district board concerned shall economise in its ordinary expenditure in all reasonable ways and shall set apart as much of its funds as possible for expenditure on works, adapting its programme of works, as far as it can, to subserve the purposes of relief. On the approach of distress, the ordinary works of the district board shall be expanded in order to meet the increased demand for labour and to enable the opening of regular relief works to be postponed as long as possible, as also to afford a test of the severity of the distress and of the necessity for regular relief operations. Test works which may be opened in affected areas and such of them as may be continued where the distress is prolonged without the necessity of a declaration of scarcity or famine, shall, except in cases in which the Provincial Government will decide otherwise, be managed by the district board subject to the control by the District Magistrate and shall be conducted strictly in accordance with the provisions of the "Bengal Famine Code, 1913," and the "Famine Manual," published by the Government of Bengal, Revenue Department. Ordinary works in progress under the district board, or required by it, shall, whenever possible, be utilised or opened as test works. In case of any disagreement between the District Magistrate and the district board as to whether ordinary works in progress or works required by the district board shall be so utilised or opened, the matter shall be referred to the Divisional Commissioner whose decision shall be final.

2. Expenditure on test works including the cost of the temporary staff, if any is specially employed for the purpose, shall, in the first instance, be defrayed by the district board concerned and funds may be advanced by the Provincial Government as required. At the final adjustment of accounts, the Provincial Government may reimburse the district board to such extent as may be thought proper upon a consideration of the state of its finances and of the utility to the board of the works carried out and of any expenditure incurred in excess of normal rates on account of the employment of unskilled and unprofitable labour.

3. Except in cases in which the Provincial Government specially directs otherwise, the district board concerned shall continue the test works in progress even when such works become relief works at the declaration of scarcity or famine and shall also conduct those relief works that may be started after such declaration. After the declaration of scarcity or famine, the whole cost of relief works including that of the temporary staff, if any is specially employed for the purpose by the Board but excluding that of the permanent staff of the board, will be borne by the Provincial Government.

Model By-laws for the control of brick-field.

1. For the purposes of these by-laws "brick-field" means a place where burnt or sun-dried bricks are made.

2. No person shall establish a new brick-field or work an existing brick-field without first obtaining a license from the district board in Form A appended to these by-laws, provided that no license shall be necessary for making bricks out of earth dug from the ponds that are especially assigned for the purpose by the district board, and the bricks so made are used for erecting buildings for the use of villagers themselves.

3. No new brick-field shall be established within a distance of 50 yards from the outer boundary of any public road or half a mile from any inhabited area, but the existing brick-fields shall, subject to the payment of license fee and compliance with the sanitary provisions of these by-laws, continue during the currency of their present lease. Such lease shall be proved to the satisfaction of the Chairman of the district board by producing the registered Instrument mentioning the period of lease.

4. Before a license for a brick-field is issued each case shall be referred to the District Health Officer for opinion, and the license shall not be issued if the establishment or continuation of the brick-field is considered to be dangerous from the point of view of public health. If there be any difference of opinion between the District Health Officer and the district board, the matter shall be referred to the Assistant Director of Public Health of the circle concerned, whose opinion on the matter shall be final and binding.

5. For every license for a brick-field a fee of five rupees shall be payable annually.

7. Application for the renewal of a license shall be made by the 31st August, or at least one full month before the date of termination of the license.

8. No person shall make any excavation of a depth of more than 5 feet for the purpose of removing or causing to be removed earth to be used for making bricks:

Provided that this by-law shall not apply in case of village ponds from where *kacha* bricks are actually made by the villagers themselves for their own use.

9. Subject to the approval of the district board the licensee shall provide—

(*a*) adequate and suitable accommodation for the labourers working at the brick-field;

(*b*) pure and wholesome water-supply for drinking and other domestic purposes of such labourers; and

(*c*) sufficient and suitable latrines and urinals for the labourers.

10. Any license granted under these by-laws may impose such other conditions as in the opinion of the district board appear necessary for the safety and convenience of the public or any portion of the public.

11. Every application for a license under these by-laws shall contain full particulars of the situation and boundary of the land to be used as brick-field for which the license is required together with a site plan, in duplicate, of the land. On the receipt of the license, the licensee shall demarcate the boundary at the site to the satisfaction of the Chairman of the district board before actually starting work.

12. Any person who commits a breach or abets the commission of a breach of any of these by-laws shall on conviction by a Magistrate be punishable with a fine which may extend to fifty rupees, and in the case of continuing breach with a further fine which may extend to five rupees for every day during which the breach is continued after the offender has been convicted of such breach, and if a licensee is so convicted his license may be cancelled.

RESOLUTION—No. 1681P.H.

CALCUTTA, THE 15TH OCTOBER 1941.

Read—

The Report of the Director of Public Health, Bengal, for the year 1939.

Vital Statistics.—The number of births registered during the year was 1,597,651 as compared with 1,521,254 in the preceding year representing an increase of 76,397. The birth rate was 32·0 per mille being 4·9 per cent. above the rate of 1938. The deaths in 1939 numbered 1,090,530 as against 1,315,886 in the previous year a fall of 225,356, the death-rate being 21·9 per mille and 17·0 per cent. lower than that in the previous year. Compared with the year 1938, the figures for 1939 were remarkably favourable and it is satisfactory to note that the normal condition in the provincial birth and death rates, temporarily disturbed in the former year, was again restored in the year under review.

Against the quinquennial averages of 32·1 birth-rate and 24·4 death-rate, both the birth and death rates for 1939 showed a decrease of 0·3

and 10·6 per cent., respectively. The total births exceeded the deaths by 507,121 against an excess of 205,368 in 1938. Calcutta was the solitary district in which deaths exceeded births.

An interesting feature was that both the birth and death-rates in Bengal in the year under review were lower than in all other provinces except Assam, North-West Frontier Province and Sind. The highest birth-rate recorded was in the district of Darjeeling (38·7) and the lowest in Calcutta (25·6). As in the preceding year, the highest death-rate was recorded in the district of Darjeeling (34·9) and the lowest in Khulna (16·1). The proportion of male births in every 100 female births was the same as in the year 1938, viz., 107, while 109 males died to every 100 females.

It must however be borne in mind that the above figures are not absolutely free from an element of inaccuracy due to the imperfections in the existing system of recording vital statistics in this province.

Infantile and maternal mortality.—The total number of infantile deaths in 1939 was 234,301 compared to 280,923 in 1938. The infant mortality rate per thousand births fell to 146·6 from 184·7 in 1938. 58·8 per cent. of total infantile mortality occurred among infants under the age of 1 month, 27·4 per cent., among infants between 1 and 6 months and 13·8 per cent. among those between 6 and 12 months. The number of still-births registered in the year under review was 64,943, showing a rate of 4·1 for every hundred live births as against 4·7 in 1938. Still-births had been steadily on the increase since the year 1935 and the slight fall in 1939 which may be accidental or due to defective registration does not warrant any definite conclusion. The deaths recorded from maternal causes numbered 15,792 as against 17,438 in the preceding year indicating an appreciable reduction.

Maternity and child welfare work is mainly a responsibility of the local bodies towards which Government made annual grants inclusive of a grant for the training of indigenous dais and provided for training pupil nurses and dais in the State and private hospitals. Suitable recurring grants-in-aid were also given to certain maternal and child welfare centres and towards educative propaganda through the Bengal Health Welfare Committee. With a view to encouraging the opening of maternity and child welfare centres in rural areas and with the object of securing substantial development of the service, a moderate scheme for establishment of maternity and child welfare centres providing a minimum standard of efficiency regarding staff, equipments, buildings, etc., was framed by the Public Health Department. Government approved the scheme during the year under review and offered to make suitable grants-in-aid to local bodies and recognised voluntary associations towards the establishment as well as maintenance of such centres. Government would urge again the local authorities to spare no efforts to put into operation all measures within their power for the benefit of mothers and children by devoting a larger share of their resources towards these services and avail themselves of the offer of the grants-in-aid in increasing number. Government have appointed a Lady Superintendent for maternity and child welfare work with the necessary staff in order to promote and co-ordinate the activities of local bodies, etc., in this direction.

General Epidemiology.—*Cholera.*—The total number of deaths from cholera during the year under report was 33,221 with a death-rate of 0·7 per mille as against 71,133 deaths in 1938 with a death rate of

1·4 per mille, showing a decrease of 53·3 per cent. over the figures of 1938 and of 41·7 per cent. over the average of the previous quinquennium. These statistics seem to show that the severe flood of 1938 was responsible for the sudden rise in deaths from cholera in that year. 3·0 per cent. of the total deaths in the province in 1939 was ascribed to cholera. The districts which recorded the highest death-rates were Howrah (1·7 per mille), Burdwan (·5), Bakarganj (1·2) and Calcutta and 24-Parganas (1·1). Darjeeling continued to maintain its immunity from cholera. There were 30,008 deaths in the rural areas with a rate of 0·6 against 1·5 per mille in the preceding year. The towns recorded 3,213 deaths with a rate of 0·9 against 1·0 per mille in 1938. The incidence of mortality from this disease was higher than in any other province except Orissa.

Cholera preventive measures.—All approved anti-cholera measures were adopted in combating this disease. Anti-cholera vaccine was freely used although the quantity of vaccine and the number of inoculations showed a remarkable decline apparantly owing to the fact that the incidence of cholera decreased in the year and to defective organisation on the part of the local authorities in carrying out the work of preventive inoculation. As in the year 1938, the Director of Public Health deputed a number of mobile medical and sanitary units or floating dispensaries for anti-cholera and other epidemic work and also rendered assistance to local authorities by lending on requisition the services of medical and sanitary officers during epidemics. Preventive measures included disinfection of sources of water-supply, extensive public health propaganda and promulgation of temporary regulations under the Epidemic Diseases Act. The question of provision of adequate sources of pure drinking water throughout the province for prevention of the formidable epidemic disease is engaging the attention of this department.

Small-pox.—Small-pox took a toll of 7,029 lives in the year under review against 9,289 in the preceding year, the death-rate being 0·1 and 0·2 per mille respectively. The mortality from this disease thus fell 50 and 75 per cent. compared with the previous year and the previous quinquennium respectively. It represented 0·6 per cent. of the total provincial mortality in 1939. The death-rate from the disease during the year was lower than in any other province except Madras and Central Provinces only.

Of the total number of deaths from small-pox 408 occurred among infants below one year of age and 748 among children between ages of 1 to 10 years, against 530 and 1,183 respectively in 1938.

Calcutta accounted for 2,241 deaths out of a total of 3,139 in the towns. Its death-rate (2·0 per mille) was, as in the previous year, highest in the province, while the lowest death-rate (0·01) was recorded in the districts of Malda, Murshidabad and Jalpaiguri. The districts of Chittagong and Tippera were free from small-pox during the year under report. On the whole, the death-rate from this disease increased in urban areas by 28·6 per cent. and decreased in rural areas by 41·4 per cent.

The number of persons vaccinated in 1939 was 7,925,382 against 7,843,545 in 1938. The slight increase might have been due to the greater attention paid by the local authorities than what has hitherto been the case with them in the matter of vaccination. Although this

is a happy sign, Government cannot but reiterate the urgent necessity, on the part of the local authorities, of organising an intensive campaign of vaccination according to a fixed programme so as to cover effectively the population of the whole district.

The local bodies should do well to appoint female vaccinators in the rural areas as the pardanashin ladies resent being vaccinated by male vaccinators with the result that a large percentage of population remain unvaccinated.

The total cost of vaccination in 1939-40 was Rs. 4,61,790 against Rs. 4,58,503 in the preceding year. The average cost of each successful vaccination in the whole Presidency was the same as in the previous year, viz., 1 anna and 10 pies. The average cost of manufacture of vaccine lymph per dose of half a grain amounted to 0·6 pies only as in the preceding year and compares very favourably with the cost of manufacture in other provinces of India and is considered to be the cheapest.

Fevers—Malaria and Kala-azar.—Mortality from "fevers" (which include deaths from diseases of a widely varying character) fell from 819,763 in 1938 to 687,587 in 1939, the death-rate being 13·8 per mille against 16·4 per mille in the preceding year—a decrease of 8·6 per cent. over the last quinquennial average. The registration of deaths continued to be in the hands of the village chaukidars whose reports cannot be completely relied upon in regard to the causes of deaths.

Malaria.—It is gratifying to observe that there was a phenomenal reduction of 75,200 deaths in the total mortality from malaria in 1939, as compared to the previous year in which 416,521 deaths were registered. The death-rate correspondingly came down in 1939 by 18·1 per cent. Malaria was responsible for 49·6 per cent. or nearly half of the total deaths from "fevers" and 31·3 per cent. of the total provincial mortality during the year under review as against 50·8 and 31·6 per cent. respectively in the preceding year. 99·4 per cent. of the total deaths from malaria occurred in the rural areas and 0·6 per cent. in the urban areas compared to 99·3 and 0·7 respectively in 1938. The highest death-rate was recorded in the district of Rajshahi as in the previous years, viz., 14·6 per mille against 19·0 in 1938. Dinajpur came second with 13·4 per mille against 11·5 in 1938, while Calcutta, with 0·5 per mille, returned the lowest rate as in the previous year. Fever indices however indicated that the district of Hooghly was most intensely affected by malaria in 1939 and showed decrease in 19 districts thus reversing the previous year's position.

Kala-azar.—This disease accounted for 17,056 deaths with a death-rate of 0·34 per mille as against 21,642 and 0·43 respectively in 1938. The number of deaths in the rural areas decreased by 4,540 from that of the previous year. The highest mortality from the disease was recorded in Jessore town. The number of kala-azar cases admitted into the various hospitals for treatment fell from 1,06,794 in 1938 to 98,155 in the year under report. The decrease was most noticeable in the districts of Jessore, Rangpur and Tippera. The special anti-kala-azar campaign undertaken in the district of Darjeeling was continued during the year under review. 20 kala-azar treatment centres and 2 undieted shelters were maintained and 11 medical licentiates and 2 Sanitary Inspectors were entertained for carrying out effective treatment and intensive propaganda work throughout the kala-azar affected areas of the district.

Special anti-malaria measures.—The comprehensive malaria survey of representative areas in different parts of the province, which was started in 1937 was concluded in November 1939 and a complete and detailed report will be published shortly.

The survey and control measures in connection with the anti-ludlowii campaign in the vicinity of Calcutta were continued satisfactorily in the Salt Lake area, Budge Budge and the suburban areas with the co-operation of the Corporation of Calcutta and other local authorities and interests concerned.

The special anti-malaria scheme on a five-year plan for the town of Jessore and its adjoining rural areas financed jointly by the Indian Research Fund Association and the Provincial Government was undertaken with effect from July 1939. Various anti-malaria measures were taken up such as filling up of dobas, borrow-pits and low-lying lands, kerosinisation of tanks and water-pools, rearing of larvicidal fishes, removal of acquatic vegetation from rivers, khals, etc., opening of culverts for free flow of water and improvement of draining.

The system of doling out grants to local bodies for local minor anti-malarial measures which was in practice so long, was found to be largely ineffective and wasteful. Government therefore decided to make larger grants available for expenditure on comprehensive anti-malaria projects of a more or less permanent nature, viz., flushing schemes, drainage schemes, anti-larval measures and other projects approved by the Public Health Department. The various district boards were accordingly asked to prepare such schemes and to forward them for the approval of Government. Certain schemes were received and examined by the Public Health Department and the Irrigation Department in 1939 but none of them actually materialised during the year.

Respiratory diseases.—There were 88,458 deaths due to respiratory diseases in 1939 as against 99,763 in 1938, the respective ratios being 1·8 and 2·0 per mille. The death-rate was also equal to the provincial quinquennial average of 1·8 per mille. As usual, Calcutta recorded the highest death-rate (8·6) and was followed by Jalpaiguri (5·6), Hooghly and Darjeeling (4·1) and Howrah (3·6). Malda with a rate of 0·3 stood at the bottom of the list as in the previous six years.

Pneumonia.—It took a toll of 47,888 lives against 52,258 in 1938, showing a decrease by 8·3 per cent. As in the previous years, the highest death-rate was recorded in Jalpaiguri (4·50 per mille) and the lowest in Malda (0·14). Hooghly with a death-rate of 2·78 occupied the second place and Darjeeling with a rate of 2·67 stood third.

Pulmonary tuberculosis.—It accounted for 12,422 deaths compared to 14,668 in the preceding year or 0·25 per mille against 0·29 per mille in the previous year. There was thus a phenomenal decrease in mortality from this disease in 1939. Of the total deaths in the urban areas from this cause in 1939, Calcutta alone was responsible for 69·9 per cent. the death rate being the highest (2·61 per mille) of all districts. The highest death-rate was reported from, as in 1938, South Dum-Dum (5·4 per mille). No deaths from pulmonary tuberculosis were reported from 20 towns in the year under review.

As a first step towards the effective control of tuberculosis in the province, a tuberculosis survey of certain selected typical areas—industrial and rural—was sanctioned by Government and two centres,

one at Serampore and the other at Barisal were started during the year under review. A comprehensive scheme for the control of the disease was also drawn up by the Public Health Department. It comprised three main stages, each stage being expected to be worked out in a period of five years. The Bengal Tuberculosis Association continued to carry on valuable publicity and propaganda work in the province with the usual grant from Government. The Association also trained a good number of tuberculosis workers and home visitors during the year.

Other diseases.—*Enteric fever.*—There were 8,290 deaths from enteric fever compared to 9,808 in the preceding year. Mortality from this disease however increased in Calcutta by 8·6 per cent.

Influenza.—The number of deaths registered as due to Influenza went up during the year under report to 2,467 from 2,143 in 1938, the rural areas being responsible for the unexpected rise.

Cerebrospinal fever.—Cerebrospinal fever accounted for 1,721 deaths against 1,337 in 1938, indicating that the disease made a rapid headway during the triennium ending with 1939. The death-rate from this disease increased by 155·6 per cent. in Calcutta.

Typhus fever.—Typhus fever, which is predominantly a disease of the rural areas, has been alarmingly on the increase since the year 1936. 4,443 deaths occurred due to this disease in 1939 against 4,034 in 1938, showing an upward move by 25 per cent.

Dysentery and diarrhoea.—Dysentery and diarrhoea were responsible for 27,301 and 27,152 deaths respectively, compared to 37,966 and 31,266 in 1938. Of the total provincial mortality in the year under review, 5 per cent. was attributed to these two diseases together as against 5·3 per cent. in the preceding year.

Leprosy.—1,517 deaths from leprosy occurred in 1939 of which a vast majority, viz., 1,446 were reported from the rural areas. Leprosy is a growing menace in the province for the control of which a provincial anti-leprosy scheme to be brought into operation by stages in five years has been formulated. The first item of this scheme, viz., a special course of training of Medical and Health Officers in leprosy in anti-leprosy work was arranged with the British Empire Leprosy Relief Association, since the close of the year under review.

Fairs and festivals.—The Public Health Department and the local authorities concerned co-operated with great success in undertaking medical and sanitary arrangements for the welfare of the pilgrims and the prevention of outbreaks of infectious diseases in the chief melas in the province, viz., Ganga Sagar, Nangalbund, Sitakund and Tarakeswar melas. The St. John Ambulance corps rendered valuable assistance at the Ganga Sagar mela where it is gratifying to note that of the five cholera cases only one proved fatal. No deaths occurred from cholera either at the Nangalbund or at the Sitakund mela. Untortunately, however, cholera broke out in an epidemic form at the Tarakeswar mela and spread to the neighbouring areas. The epidemic was quickly brought under control as a result of the combined efforts of the Public Health Department and the public health staff of the district board. Of the 14 cases of cholera at the mela ground only 3 proved fatal.

Sanitation and water-supply.—Municipal bodies in Bengal spent Rs. 53,314 or 37·6 per cent. of their total receipts inclusive of the opening balance on sanitary work during the financial year 1938-39 showing an increase of 0·1 per cent. compared with the expenditure of the previous year. The average expenditure per head of the municipal population was nearly steady, viz., Rs. 2-4-2 against Rs. 2-4-9 in 1937-38. The average incidence of taxation per head of population however, rose from Rs. 3-6-4 in 1937-38 to Rs. 3-7-7 in the year under review. Of the total municipal expenditure on sanitary works, Rs. 24,23,018 was spent on conservancy, Rs. 13,76,742 on water-supply and Rs. 5,05,727 on drainage.

The district boards in the rural areas generally maintained their proportionate expenditure on water-supply, drainage, sanitation and vaccination by spending 3·9,0·3, 9·7 and 1·2 per cent. respectively of their total receipts during 1938-39, compared to 3·8, 0·4, 8·5 and 1·1 per cent. during the preceding financial year. The increase attention paid by the district boards to general sanitation is clearly noticeable.

The union boards devoted from their funds Rs. 9,60,747 to water-supply, Rs. 93,272 to drainage and Rs. 87,521 to conservancy, showing a decrease on the former two items and an increase on the latter over the expenditure in 1937-38.

During the year under review increased grants by Government towards supply of drinking water in the rural areas, as in the preceding year, were distributed among the different districts in accordance with the revised policy of distribution and disbursement of the annual grant for the improvement of rural water-supply. It is however a matter of great concern to the Government that proper steps are not being regularly taken by the local bodies for due maintenance and repairs of the sources of water-supply provided by the Government. It is important to note that, with a view to solving the grave problem of rural water-supply for drinking purposes throughout the province within a definite period, the district boards were requested, during the year under report, to have a survey made of all existing sources of water supply and to prepare a complete programme of water-supply through the expert agency of their engineering and health departments. After these schemes were checked and examined by the local water-supply committees at the headquarters of thanas, subdivisions and districts, and submitted to Government for their approval, the question of financing and executing the schemes and other allied matters would be settled.

School hygiene.—The Director of Public Health has furnished an account of the school health services now in existence in Calcutta and in municipal and rural areas. The money allotted by Government during the year under review for giving effect to the scheme for medical inspection in all high schools in the province, which was approved by Government in the Education Department in 1938, could not be utilised owing to certain unforeseen circumstances. With a view to imparting health education through schools, organising health examination of school children and providing medical relief to them, a School Hygiene Division under the Public Health Department was established on an experimental basis for a period of five years with one Assistant Director of Public Health, one Medical Inspector of School Hygiene, one Medical Inspectress of School Hygiene and certain other subordinate staff.

Health propaganda.—The Publicity branch of the Public Health Department was transferred to the newly created Publicity Department of Government with effect from August 1939. The ten touring cinema parties and the Government exhibition van carried on publicity work as usual.

Miscellaneous.—The normal activities of the Public Health Department were maintained and their scope was widened in certain directions. Grants-in-aid on the usual scale were made to local bodies and voluntary associations on account of health welfare services. Besides paying a moiety of the salaries of the health officers employed by the local bodies, a sum of Rs. 11,73,000 was spent by Government in assisting the district boards to run the thana public health units in the rural areas. The increased grant of Rs. 7½ lakhs from provincial revenues was repeated during the year under review for the improvement of the sources of water-supply for drinking purposes in the rural areas. A sum of Rs. 2,19,500 was also allotted and spent for the same purpose among the different districts of the province from the Government of India's second subvention for rural uplift. A further allotment of Rs. 14,000 was made and spent out of the Central Government's grant for schemes for small sanitary projects in the rural areas. Other grants to local bodies included Rs. 1,20,000 for combating kala-azar, Rs. 50,000 for free vaccination and Rs. 4 lakhs for the free distribution of quinine. The Tuberculosis Association, Bengal, as well as the Bengal Branch of the British Empire Leprosy Relief Association were assisted with a grant of Rs. 10,000 to each as in the preceding year.

The Public Health Department continued to render prompt and effective assistance to the local authorities in times of outbreaks of epidemic diseases by sending extra staff, drugs and disinfectants to supplement their resources.

General remarks.—The year 1939 was comparatively a better year for public health. It was free from any natural calamity and was a year of respite after the devastating flood of 1938. The rate of mortality from each of the principal diseases discussed *ante* came down appreciably during the year under review. The Minister of Health has, on more than one occasion both inside and outside the Legislature, explained in detail the programme he has set before him for improving the health of the people of the province. Besides the schemes referred to in the foregoing paragraphs, Government have under their serious consideration a comprehensive scheme for the reorganisation of the rural public health services, which is proposed to be introduced in the first instance in seven selected subdivisions in seven districts of which the district boards have agreed to adopt and participate in the scheme. Government trust that the local bodies, associations, as well as the public in general will offer their unfailing help and co-operation in solving the various problems of public health within a measurable distance of time.

Personal.—Lt.-Col. A. C. Chatterji, I.M.S., held charge of the department throughout the year. Government desire to record their appreciation of the services of the Director of Public Health in efficiently administering the department with its increased activities during the year under review.

Second Forecast of the Sugarcane Crop of Bengal, 1941-42.

(*Note.*—On an average of the five years ending 1939-40, the area under sugarcane in Bengal has represented some 7·9 per cent. of the total area under sugarcane in India.)

Character of the season.—Since the issue of the first forecast in August last, the weather conditions have generally been favourable and the present condition of the crop is fairly satisfactory.

Area planted.—The total area planted with the crop is estimated to be 300,800 acres this year as against 333,400 and 318,100 acres (revised), respectively, reported in the corresponding and final forecasts of last year.

Outturn.—According to the estimates of the District Officers, the average outturn of the crop for the province this year works out at 77 per cent. of the normal against 83 and 81 per cent., respectively, in the corresponding and final forecasts of last year.

Condition figure.—The condition figure for sugarcane is estimated at 77 per cent. as against a ten years' average at 85·8 per cent. This means that the condition of this year's crop is equal to about 90 per cent. of the ten years' average. The current year's acreage is less than that of the previous year by 5·44 per cent.

Second Forecast of the Cotton Crop of Bengal, 1941-42.

(*Note.*—On an average of the five years ending 1939-40 the area under cotton in the Province of Bengal and the Tripura State to which this forecast relates has represented some 0·2 and 0·1 per cent. respectively of the total area under cotton in India.)

There are two crops early and late. The early crop is chiefly grown in the Chittagong Hill Tracts, Mymensingh, Tripura State and also to a small extent in some other districts. The late crop is grown in Bankura, Midnapore and Mymensingh.

Character of the season.—Unfavourable weather conditions in the shape of incessant and excessive rains have adversely affected the growth of the crop in the districts of Mymensingh and Chittagong Hill Tracts and as such the outturn is likely to be poor in these districts. Elsewhere the effect of weather has been generally favourable and the present condition of the crop is satisfactory.

The sowing of late variety has commenced under favourable conditions.

Area sown.—The total area sown with cotton is reported to be 102,273 acres (revised) this year as against 103,368 acres (revised) returned in the corresponding forecast last year. Out of this total area, 102,228 acres (revised) has been put under early cotton and 45 acres is reported to have since been sown under late cotton this year as against 103,123 acres (revised) and 245 acres (revised) respectively in the corresponding forecast last year. The decrease in area is due mainly to revision of estimates in the Mymensingh district.

The area under cotton classified according to trade description comes to:—

opinion of the officer controlling the examination) to be examined at one time, he will arrange for two separate examinations in the field tests. All candidates must appear at the same paper examination.

7. Candidates practising in the courts of the Presidency, Rajshahi and Burdwan Divisions will be required to present themselves at the Bengal Engineering College; and those in Dacca and Chittagong Divisions and in Assam, at Dacca.

1. Classes for the training of pleaders in surveying will be opened in January 1942 at the Bengal Engineering College, and the Ahsanullah School of Engineering, Dacca, for both Class I and Class II candidates, provided sufficient candidates register their names at each centre.

2. The courses will last for ten weeks and will consist of practical work combined with class instruction. The routine and hours of attendance will be settled by the heads of the institutions, who will also decide the exact locality in which the classes will be held and date of the opening.

3. Pleaders must make their own arrangements for attending this course. No tents or other residential accommodation will be provided.

4. Credit for attendance at these classes will not be given unless the pleader has been present for 80 per cent. of the working days and for the full working hours for each day. The attendance must be distributed over the course so that no subject is neglected.

5. Candidates should usually have knowledge in Mathematics equivalent to the standard of Additional Mathematics prescribed for the Matriculation Examination of the Calcutta University and must make an application, for which there is no prescribed form, to the Principal, Bengal Engineering College, for registering their names not later than the 30th November 1941.
